

Percent Decrease Target Income Function

04/14/2026 2:07 pm EDT

When creating a target income for a client, SIPS offers multiple configuration options, including the ability to automatically reduce target income by a set percentage at a specified age. Below is the hypothetical example using the decreased target income function at age 70.

Client Information:

- Jane Doe, age 65, birth date: 01/01/1961, retirement age: 70

Incomes:

- Wages: \$175,000 growing at 3%, Social Security (SS) at 70: \$48,000, COLA at 2.8%

Assets:

- Taxable Brokerage Account: \$800,000, Moderate 3% net growth per year
- Traditional IRA: \$300,000, Conservative 2% net growth per year
- Roth 401(k): \$900,000, Aggressive 5% net growth per year
- Residential Home: \$380,000 in value, amount owed: \$25,000

Goals and Objectives:

- Target Income: While working, the target income is \$120,000 with an inflation factor of 2.8%. At age 70, the target income will decrease by 20% in year 6 and then continue growing at an inflation factor of 2.8%. To learn more about switching calendar and year plan views see article: [Viewing Calendar Years instead of Plan Years](#)
- Taxable Brokerage Account: Contribute any excess amount for the remainder of the plan. Withdraw from the account to help meet the target income.
- ROTH 401(k): Roth 401(k): Contribute 5% of employee income per year to receive the full match from the employer until age 70. When RMDs begin, withdraw the full amount for the remainder of the plan.
- Traditional IRA: Contribute \$8,000 per year until the age of 70, and beginning in retirement years, withdrawal amounts to meet the target income.

Expenses:

- Travel: While working \$6,000 with an inflation rate of 2.8%, at age 70, travel expenses start at \$8,000 with an inflation rate of 2.8% until age 80.
- Gifting: While working \$5,000 per year, in retirement \$10,000 for the remainder of the plan.

SIPS provides other shortcuts to more accurately forecast spending as your clients age. Below is a list of helpful articles:
